# QANDR
FRONT-END DESIGN

Interface presenter screen and interface audience smartphone
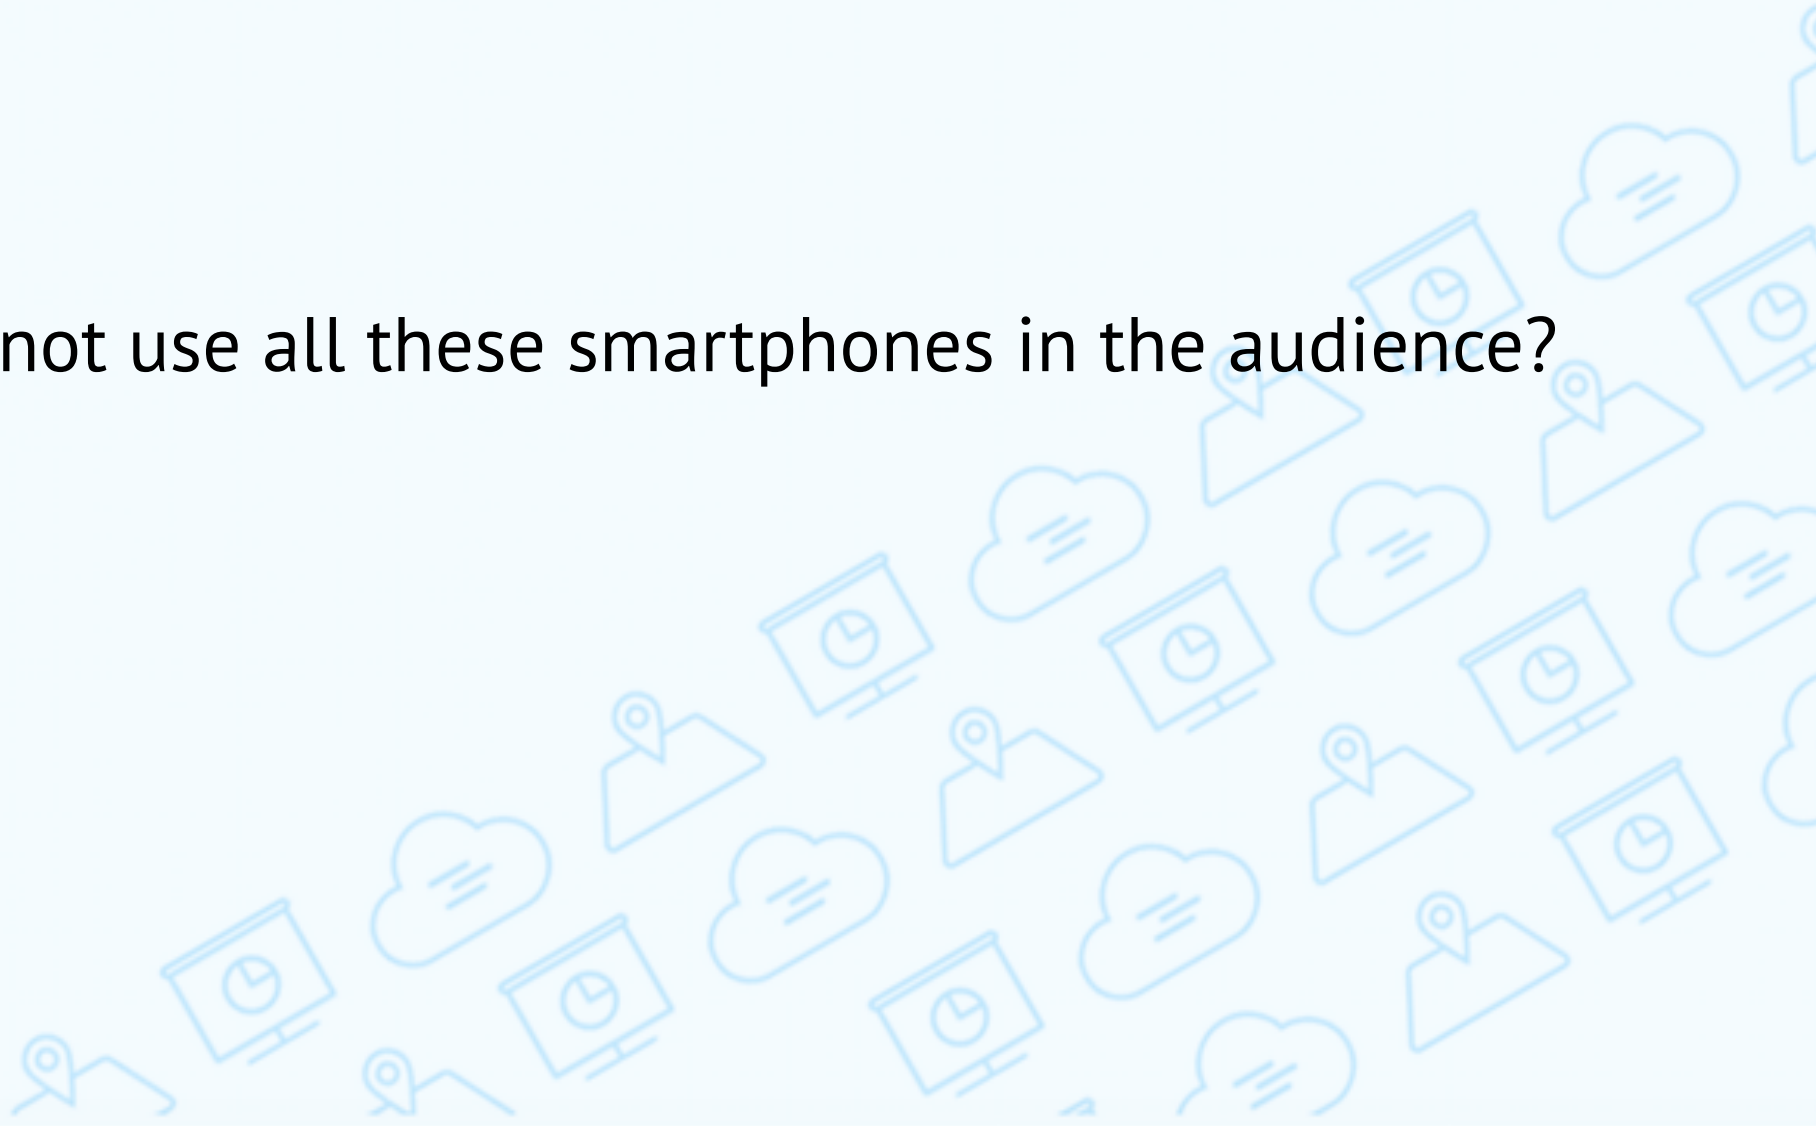

Designed by Pinestudio in cooperation with Noterik BV
April 2016

Do you ever wonder what makes your audience ponder?

Why not use all these smartphones in the audience?

QANDR - What does it do?

The tool allows a presenter to get real time feedback from his audience during a presentation, event or business meeting, by pushing interactive elements to the smartphones in the audience.

QANDR - How does it work?

Just type the session link in your mobile browser and your phone will become part of the system. A simple WiFi will do but phones can also use 3G or 4G connection.

There is **no need to install an app** and **no need to register** as a user.

QANDR and your presentation - two models of use

1. Beside your normal presentation tool (more flexible)

Using it as a small nifty tool beside your presentation, by switching your presentation screen to a QANDR question (like switching to a YouTube movie).

2. Import your slides into QANDR (more advanced)

We also allow to import your slides (pdf or powerpoint) into QANDR and use the tool also as simple slide viewer. This has the advantage that controlling your presentation will be more straightforward. You will be able to navigate though your slides and interactive moments using the same default clicker, left or right arrow key, or by using a smartphone controller that is available for a presenter.

QANDR

12 of 20   Powered by QANDR   65 Users in session   qandr.eu/europe

*Transparent footer **is by default not shown**, only appears when presenter moves his mouse.*

In this mode we want the presenter to forget that he is using QANDR, slide interaction is just the same as Keynote, Powerpoint or Google slides
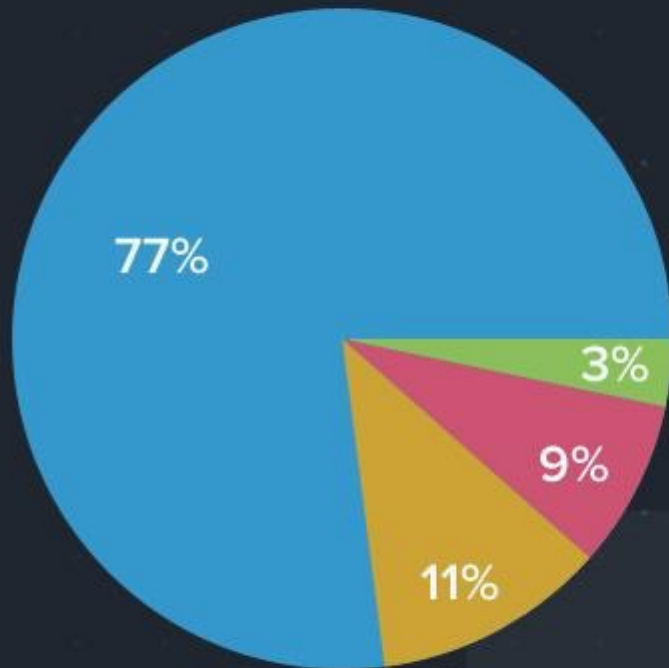

Audience smartphone - Slide interface

Presentation screen - Poll results in a pie chart

Polling

Do you feel migration is an important topic for europe?

77%

3%

9%

11%

- There is nothing new about it, it's just a hype
- We shoud deal about it, but not the most important issue
- Really quite important, part of the top 3 priorities
- If we don't act now, Europe will collapse

Poll answered

Presentation screen - Word Cloud

Words with more votes will get bigger

Audience smartphone - Word Cloud

*Every person in the audience is allowed to push three words.*

Beside entering their own words they can also up-vote a word suggested by somebody else.

Presentation screen - Pointer

Several people in the audience use the touch screen of their smartphone to navigate their personal dot on the main presentation screen

Audience smartphone - Pointer

Welcome **USER102312** Change

📍 Spatial Spotting

Which country accept the most migrant per inhabitant?

MAIN SCREEN
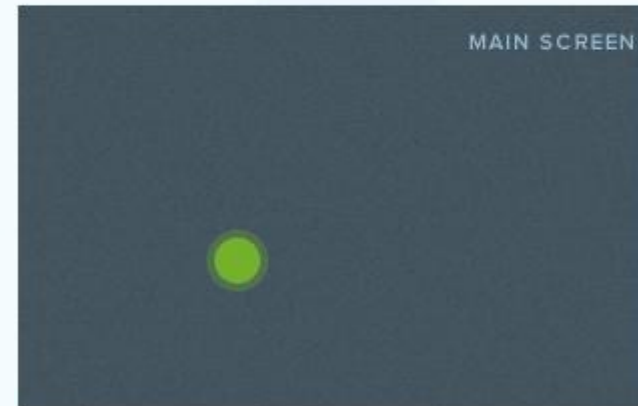

Please move your dot and place it on the mainscreen
